FUJITSU GENERAL LIMITED

1. Comparison of VRF System

[Comparison of Operating System]

1) Structure of Refrigerant Circuit System

	FGL	Daikin	Melco
System	Constant speed + Constant speed + Constant speed 5.5 + 3 + 1.5  2 fans 3 compressors (constant speed)	Constant speed + Inverter 5 + (1.5 ~ 5)  2 fans 2 compressors (inverter + constant speed)	Full inverter (2.5 ~ 10)  1 fan 1 compressor (full inverter)
Operating Capacity Change	 Power Accumulation Technology 7 steps + linear	 20 steps Inverter Constant speed 5HP	 85 steps Inverter
Comparison of EER	 Cooling Energy Efficiency Ratio (EER) Operating capacity (HP)		 Heating Energy Efficiency Ratio (EER) Operating capacity (HP)
Merit	Smooth operation by power accumulation technology through combination of compressor operation and electric expansion valve	Less higher harmonic compared with full inverter	Less starting current. Can control refrigerant flow only by compressor between 2.5HP - 10HP
Demerit	Starting current increases for a short time due to frequent On/Off of compressors	(1) Need to change frequency of inverter compressor quickly while On-Off of fixed speed compressor at around 5HP (2) The refrigerant flow is not smooth because of using low pressure by-pass from high pressure by-pass when operating at less than 1.5HP and 5 - 6.5HP	(1) The refrigerant flow is not smooth because of using low pressure by-pass from high pressure by-pass when operating at less than 2.5HP (2) Can not conform to EMC regulation

2) Operating System Summary

	FGL	Daikin	Melco
Model No.	AOY90TPAMF	RSEY10K	PURY-YMF-B
Refrigerant	R407C	R22	R407C
Outdoor unit capacity	28kW (90,000BTU)	28.8kW (99,000BTU)	29.1kW (99,300BTU)
Total operation capacity	2.0kW(7,000BTU) ~ 36.4kW(117,000BTU)		14.6kW (49,650BTU)~ 43.6kW(148,950BTU)
Max. number of indoor units connected	16 units	16 units	16 units
Indoor unit capacity	2.0kW(7,000BTU) ~ 17kW(60,000BTU)	2.2kW(7,000BTU) ~ 28kW(90,000BTU)	2.3kW(8,050BTU) ~ 29.1kW(99,300BTU)
Pipe connection	<ul style="list-style-type: none"> • Line branch /Header branch • Mix combination 		<ul style="list-style-type: none"> • Line branch /Header branch • Mix combination
Number of pipes	<ul style="list-style-type: none"> • 2 (Cooling only / Heat pump) • 3 (Heat recovery) 	<ul style="list-style-type: none"> • 2 (Cooling only / Heat pump) • 3 (Heat recovery) 	<ul style="list-style-type: none"> • 2 (Cooling only / Heat pump / Heat recovery)
Actual pipe length	100 m	100 m	100 m
Height difference between outdoor and indoor units	50 m (Setting indoor unit below outdoor unit) 40 m (Setting indoor unit above outdoor unit)	50 m (Setting indoor unit below outdoor unit) 40 m (Setting indoor unit above outdoor unit)	50 m (Setting indoor unit below outdoor unit) 40 m (Setting indoor unit above outdoor unit)
Height difference between indoor units	15 m	15 m	15 m
Height difference between RB units	15 m (Only heat recovery)		

※RB unit (Refrigerant branch unit)

2. Comparison of Outdoor unit

1) Outdoor Unit Summary

OUTDOOR UNIT(5 ~10HP) ○ (external static pressure)

Item		FGL	Melco	Daikin	Hitachi	Countermeasure	
1	Line up	Cooling only	10HP	8,10HP	5,8,10HP	5,8,10HP	
		Heat pumps	10HP	8,10HP	5,8,10HP	5,8,10HP	
		Heat recovery	10HP	8,10HP	8,10HP	5,8,10HP	
		5mmH ² O (external static pressure)		3mmH ² O	5mmH ² O		
2	Dimensions/ Carrying space	Height (10HP) (mm)	1,380	1,715	1,440	1,550	
		Width (10HP) (mm)	1,300	990	1,280	1,400	
		Depth (10HP) (mm)	650	840	690	785	
		Square measure (10HP) (m ²)	0.845	0.832	0.883	1.099	
		Cubic measure (10HP) (m ³)	1.166	1.426	1.272	1.703	
3	Weight	(10HP Heat recovery) (kg)	(285)	270	300	355	
4	Noise	50Hz (dB(A))	57	58	58	58	
		60Hz (dB(A))		58	58		
5	Compressor	Number	3 non inverter	1 inverter	1 inv, 1 non inv	1 inverter	
		Control frequency	ON/OFF	1 Hz step	5 Hz step and ON/OFF		
6	Current	Max.starting current (A)	68	12	67	61	
7	E.E.R (e.g.50Hz380V)	E.E.R for full load(100%) cooling	2.80	2.47	2.37	2.75	Melco and Hitachi 19.5°C WB (Indoor)
		E.E.R for full load(100%) heating	3.5	2.99	3.42	3.39	Melco and Hitachi 21.0°C DB (Indoor)
8	Control refrigerant for cooling	Refrigerant amount	less	less	more	more	
		Refrigerant phase in liquid pipe	liquid and gas	liquid	liquid and gas		
		Capacity loss in liquid pipe (40/90m)		0.94/0.83	0.92/0.81	0.93/0.83	
9	Refrigerant	Enclosed amount (kg)	13.0(R407c)	14.0(R407c)	23.5(R22)	20.5(R22)	
		Additional amount (12.7/9.52)	01/006kg/m	012/006kg/m+2kg	010/005kg/m-2kg	013/0065kg/m	
		Total amount	less	less	more	more	
10	Piping for cooling only	Branch pipe shape	Y	T	Y	Y	
		Horizontal limitation of branch pipe	Yes	No	Yes		
		Insulation for liquid pipe	(Yes)	Yes	No		
11	Reliability	Error rate by parts number	more(bad)	less(good)	more(bad)	more(bad)	Melco has 1 comp and 1 fan.
		Error rate by connection number		less	more		
		Emergency run by user	No	No	No		
12	Service	Refrigerant amount display		Yes	No		
13	External controlling	Adapter for sequential start		No(needless)	Yes		
		Heating/Cooling selector	No(needless)	Yes	Yes		
		Fan/temperature control selector	Yes	Yes	Yes		
		Comp. run/stop monitor	No	Yes	No		
		Error/normal monitor		Yes	No		

3. Comparison of Indoor Unit

1) Features

1. Reducing Start-up Time

- The time from the start of cooling and heating operation up to reaching the set temperature is reduced.

At start-up, 120% output by rated value (Conventional model % shorter)

2. Accurate Control of Room Temperature

- High performance electric expansion valve always controls optimum refrigerant circulation volume, which makes it possible to maintain precise temperature control

	FGL	Daikin	Melco
Temperature control method	Control refrigerant circulation volume by high performance electric expansion valve	Control refrigerant circulation volume	Control refrigerant circulation volume

3. Continuous cooling Operation at Low Outdoor Temperature -5°C

- Continuous cooling operation is possible by controlling the circulation volume of refrigerant, of which temperature and pressure are adjusted by the control of heat exchanger capacity of indoor unit and high performance electric expansion valve

(Performance improved from our conventional models)

	FGL	Daikin	Melco
Lowest outdoor temperature	-5°C	-5°C	-5°C

4. Indication for Filter Cleaning

- The time for cleaning filter is detected by air outflow temperature sensor and indoor unit operating time and will be indicated by a lamp.

	FGL	Daikin	Melco
Detection method	The choking of filter is checked by operating time and will be indicated.	Checked only by operating time	Checked only by operating time

5. Favorite Temperature Timer

- Timer which enables to provide the desired comfortable temperature from the time set on the timer: The period from start of the operation to reach the desired set temperature is calculated and memorized. Therefore the operation starts automatically a certain time before the time on the timer, so that the room will be at the desired comfortable temperature by the set time.

	FGL	Daikin	Melco
ON timer	The desired temperature starts from the set time	Operation starts from the set time	Operation starts from the set time

2) Basic Functions

Type	Function		FGL	Daikin	Melco
Cassette	Louver setting (Standard/draft prevention/ceiling dirt prevention)		○ Dealing structurally	○	×
	Auto closed flap		○	—	○
	Demand input	Cooling/Heating operation compulsorily stops at peak-cut	×	×	○
	Power start/stop function	Start/Stop by On/Off of main power supply	○ Auto restart	—	○
Duct	Demand input	Cooling/Heating operation compulsorily stops at peak-cut	×	×	○
Ceiling	Auto swing		○ Double	—	○ Up/down only
	Up/down louver setting		○ 4 steps	○ 5 steps	○ —
	Draft prevention	Horizontal air outflow when heating starts or thermostat is off	○	○	×
	Dry		○	○	○
	Demand input		×	×	○
Wall Mounted	Auto closed flap		○	○	○
	Auto swing		○ Double	○ Up/down only	—
	Up/down louver setting		○ 4 steps	○ 5 steps	○ —
	Louver setting memory	Starts with same louver position of previous operation	○	○	—
	Draft prevention	Horizontal air outflow when heating starts or thermostat is off	○	○	×
	Dry		○	○	—
	Demand input		×	×	○

3) Line-up

9 types, 35 models ranging from 2.2kW (7,000 BTU) to 17.5kW (60,000 BTU)

Type	Ceiling/Floor	Ceiling	Duct	Duct	Duct	Duct (High Static Pressure)	Cassette (compact)	Cassette	Wall mounted
									
Capacity									
(kW) (BTU/h)									
16.0 (17.5)	54,000 (60,000)	●				●		●	
14.0	45,000	●			●	●		●	
11.2	36,000	●			●	●		●	
8.8	30,000	●			●			●	●
7.0 (7.1)	24,000 (25,000)	●			●			●	●
5.2 (5.9)	18,000 (20,000)	●		●			●	●	●
4.0	14,000	●		●			●		●
3.6	12,000	●		●			●		
2.8	9,000		●				●		
2.2	7,000		●				●		

4. Comparison of Control System

1) System

		FGL	Daikin	Melco	
Net name		Undecided	DIII-NET	M-NET	
Wiring system		Non-polarity 2 wire	Non-polarity 2 wire	Non-polarity 2 wire	
System concept		One indoor unit failure does not affect total system as parallel processing is adopted.	Various control equipment can be combined and hierarchical distributed system can be built. (Central controller, on/off controller, standard wire, etc.)	Risk-diversifying design. Even if upper order building control system breaks down, total system can survive and MELANS back-up function works.	
Connection with other apparatus		Undecided	Total control over heat exchangers and central air conditioning equipment	Operating with ventilation related equipment freely (from remote controller on hand or central controller)	
Remote controller wiring connection		Remote controller wiring connection with standard remote controller (within same refrigeration system)	Remote controller wiring connection with standard remote controller	Remote controller wiring connection during MA remote controller (within same refrigeration system)	
Change method of group setting (Simultaneous group control by software)		Group setting is possible with central controller and PC controller	Group setting is set by remote controller on hand	Group setting is possible with remote controller on hand (network remote controller) and system controller	
Error code display		Error code displayed when it occurs. Failure history can be checked with remote controller on hand and central remote controller	Error code displayed when it occurs	Error code displayed when it occurs. Service efficiency improved with failure history record	
Connectable units to 1 system (without using gateway etc.)		400 units	128 units	50 units	
Wiring system		One control wiring system for refrigerant system	Wiring for each refrigerant	Wiring for each refrigerant	
Monitoring system		Can collect information of each unit on PC by only connecting PC to communication line (efficient maintenance)	Need D-BIP station	Made to customer's order	
Max. connectable indoor units per system		400 units	128 units	50 units (Systems can be connected each other with gateway)	
Maximum extension		3000m	1000m	200m	
Total wiring length		3000m	2000m	—	
Address setting	Auto	Yes	Yes	—	
	Manual	Yes	—	Yes	
	Remote controller	Yes	Yes (only central address)	—	
	Central controller	Yes	—	—	
Minimum setting item in single refrigeration system		—	—	Outdoor unit address Indoor unit address	
Minimum setting item in two or more refrigeration system		Refrigeration system address	—	Outdoor unit address Indoor unit address	
Setting item when connecting to central controller		Group setting	Central control address	Group setting	
Overlapped group setting		Yes	Unconfirmed	Yes	
Special unit (group) operation from two or more central controllers		Yes	Yes "Main" remote controller and "Sub" remote controller can be set. Whether group setting is same setting or is unknown.	Yes "Main" remote controller and "Sub" remote controller can be set. Group setting can be made optional, but overlapped group setting is not recommended.	
Features relating to communication system	Single refrigeration system	Merit	No special setting is required once wiring work is done. (Automatic setting can be made)	No special setting is required once wiring work is done. (Automatic setting can be made)	Series wiring is not needed as "remote controller group" is set by software. As remote controller is connected to bus line, free wiring is possible
		Demerit	—	—	Address setting is made only manually (rotary switch) based on "remote controller group"
	Two or more refrigeration system	Merit	Wiring work is easy as different refrigeration system can be connected with one series wiring. (same as MHI, Hitachi and Matsushita)	No special setting is required once wiring work is done. (Automatic setting can be made)	Series wiring is not needed as "remote controller group" is set by software. As remote controller is connected to bus line, free wiring is possible
		Demerit	Setting to distinguish refrigeration systems is required.	Wiring is required for each refrigeration system.	Wiring is required for each refrigeration system.
	Others	Merit	400 indoor units can be connected with one communication wiring system.	When central controller is not connected, only wiring work is needed and no setting is required.	—
		Demerit	"Remote controller wiring is 3 wire system with polarity"	When central remote controller is used, wired remote controller must be once connected for central address setting even in case of wireless model.	Automatic address is not possible.

2) Central Remote Controller

● Functions which are also equipped with wired remote controller

5. Comparison of VRF and Other system

	VRF system	Chiller system	Roof top system
Transfer media			
Heat carrying capacity	49 kcal/kg  (10 times higher than Chiller)	5 kcal/kg 	1.2 kcal/kg 
Individual control	Indoor unit is controlled individually 	Not possible 	Not possible 
Freely selectable operation	Cooling and heating can be operated simultaneously  Cooling and Heating	Not possible  Cooling or Heating	Not possible  Cooling or Heating
Energy saving	Partial load implies 40 to 70% less energy consumption  On and Off	Not possible	Not possible
Room temperature	Temperature of room can be controlled precisely 	Not possible 	Not possible 
Operating range	Wide operating range under cooling and heating operation  	Not possible	Not possible
Installation space	No need 	Extra machine room 	Ducting space inside the building 
Maintenance	No need	Periodic overhaul 	No need
Reliability	The system does not stop in entire building 	If indoor unit breaks down, the system stops in entire building 	The system does not stop in entire building 

Specifications

1) Cooling Type

MODEL		MANUFACTURE	FGL	Daikin	Melco	
		MODEL NAME	AO90	RSX10K7W1	PUY-250YMF-B

3) Heat Recovery Type

MODEL		MANUFACTURE	FGL	Daikin	Melco	
		MODEL NAME	AO90	RSEY10K7W1	PURY-P250YMF-B	
INPUT POWER		V/Ph/Hz	380-415/3/50	380-415/3/50	380/400/415/3/50	
COOLING CAPACITY		kW	28.0	28.0	29.1	
		BTU/h	95 600	95 600	99 300	
HEATING CAPACITY		kW	31.5	31.5	32.6	
		BTU/h	107 500	107 500	111 200	
INPUT (kW)		COOLING	9.4		11.8	
		HEATING	10.0		10.9	
CURRENT (A)		COOLING	16.2			
		HEATING	17.0			
STARTING CURRENT (A)		COOLING	63.0		19.9/18.9/18.2	
		HEATING			18.4/17.4/16.8	
E.E.R (kW/kW)		COOLING	2.98		2.47	
		HEATING	3.15		3.10	
FAN SPEED (rpm)		HIGH	730			
		LOW	360			
AIR FLOW		m ³ /h	9800	10200	11100	
FAN TYPE x Q'ty			Propellar x2	Propellar x2	Propellar x 1	
FAN MOTOR OUTPUT		W	150 x2		55x2+65+80	
COMPRESSOR	Q'ty		3(Const.3)	2(Const.1, Inv.1)	1(Inv,1)	
	MOTOR OUTPUT	kW		3.75+3.75	7.5	
DIMENSIONS HxWxD		NET(mm)	1380x1300x650	1440x12800x690	1715x990x840	
		GROSS(mm)	1535x1400x770			
WEIGHT		NET (kg)	280	300	270	
		GROSS (kg)	320			
NOISE (dB[A])		dB[A]	57	57	58	
CONDITION		INDOOR AIR TEMP. DB/WB, °C	COOLING	27□/19□	27□/19□	
			HEATING	20/-	20/-	20/-
		OUTDOOR AIR TEMP. DB/WB, °C	COOLING	35/-	35/-	35/24
			HEATING	7/6	7/6	7/6
PIPE	LENGTH	m	7.5	5	5	
	HEIGHT	m	0	0	0	
REFRIGERANT		TYPE	R407C	R22	R407C	
		CHARGE	10.5	23.5		
PIPE		LIQUID	12.7	12.7	19.1	
		DISCHARGE GAS	19.1	19.1	-	
		SUCTION GAS	28.6	28.6	28.6	
MAX PIPE HEIGHT		INDOOR UNIT BELOW	m	50	50	
		INDOOR UNIT ABOVE	m	40	40	
MAX PIPE LENGTH		m	100	100	100	
OPERATION		COOLING	°C	-5 to 52 DB	-5 to 43 DB	
		HEATING	°C	-15 to 21 DB	-10 to 15.5 WB	-12 to 15 WB
		COOL&HEAT	°C	-15 to 21 DB	-5 to 15.5 WB	-5/-6 to 2/15.5 WB
