(1) Indoor unit capacity

Correct the cooling and heating capacity in accordance with the conditions as follows. The net cooling and heating capacity can be obtained in the following way.

$$\text{Net capacity} = \text{Capacity shown on specifications} \times \text{Correction factors as follows.}$$

(a) Coefficient of cooling and heating capacity in relation to temperatures

(b) Correction of cooling and heating capacity in relation to one way length of refrigerant piping.

Equivalent piping length [m] ⁽¹⁾	5	10	15	20	25	30	35	40	45	50
Cooling	1.0	0.99	0.975	0.965	0.95	0.94	0.925	0.915	0.9	0.89
Heating	1.0	1.0	1.0	1.0	1.0	0.995	0.995	0.99	0.99	0.985
Equivalent piping length [m]	55	60	65	70	75	80	85	90	95	100
Cooling	0.875	0.865	0.85	0.84	0.825	0.815	0.8	0.79	0.775	0.765
Heating	0.985	0.98	0.98	0.975	0.975	0.97	0.97	0.965	0.965	0.96

Cooling	0.745	0.74	0.725	0.715	0.7					
Heating	0.96	0.955	0.955	0.95	0.95					

Note (1) Equivalent piping length can be obtained by calculating as follows.

Equivalent piping length = Real gas piping length + Number of bends in gas piping × Equivalent piping length of bends.

Equivalent length of each joint

Unit : m/one part

Gas piping size	φ12.7	φ15.88	φ19.05	φ25.4	φ28.58

Correction of outdoor unit capacity according to capacity of indoor unit to be operated simultaneously

FDC2001HKXRE2

Notes (1) MAX: Frequency 95Hz
 MIN: Frequency 35Hz
 (2) The range marked with ※ is for indoor unit only or indicates that small number of units are operated.

Example of piping

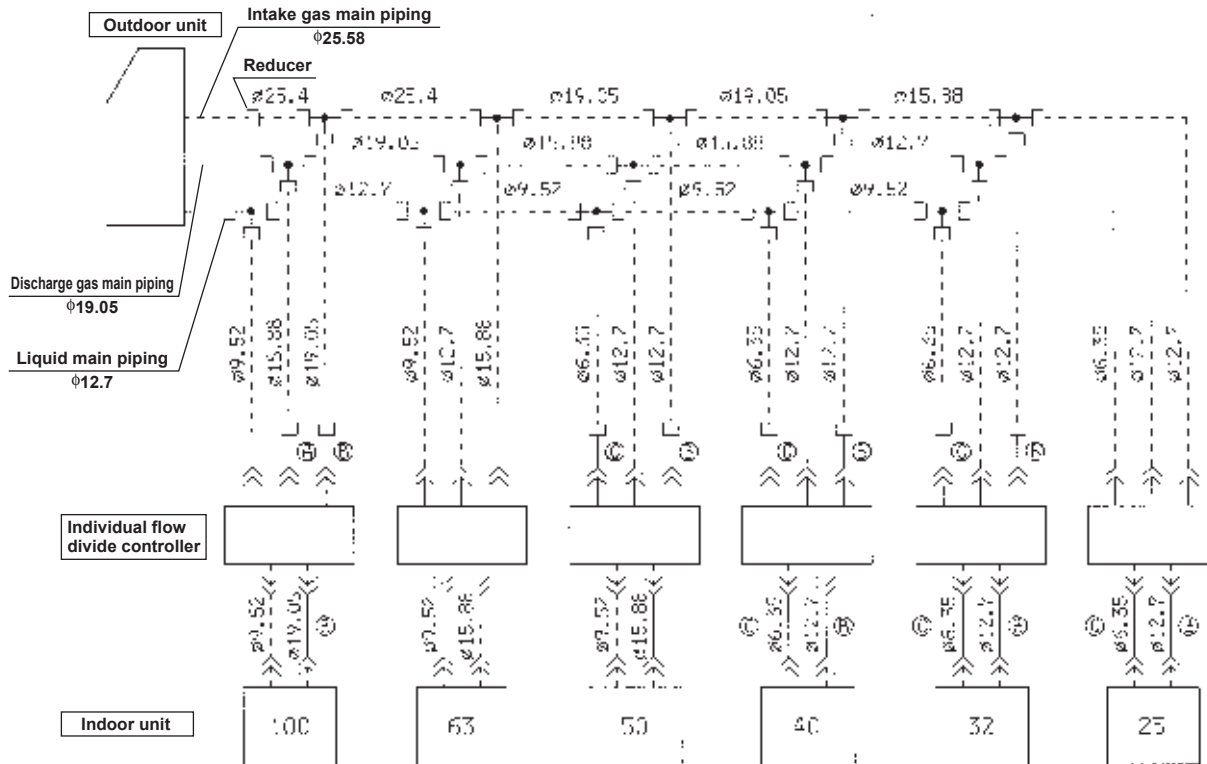

Outdoor unit: FDC2501HKXRE2

Indoor unit: Combination of 6 units

(Individual flow divide controller: HPHD01R-E × 6 sets
Branch pipe set: DIS-1KXR3-E × 5 sets)

[Total capacity: 312 (34800w)]

Symbols

Piping connection instructions (for the above example)

Process the included reducer as illustrated below.

Use the flare nuts included with the individual flow divide controller.

- When the indoor unit capacity is 90 or more

A type

Use reducer (A) and process the φ12.7 portion into a flare.
(OD12.7 → ID15.88)

B type

Cut off reducer (B) using a pipe cutter as shown in the illustration and make a flare.
(OD15.88 → ID19.88)

Reducer (B) (accessory)

- When the indoor unit capacity is 50 or less

B type

Cut off reducer (B) using a pipe cutter as shown in the illustration and make a flare.
(OD15.88 → ID12.7)

Reducer (B) (accessory)

When the outdoor unit are installed at a higher level than the individual flow divide controller and a vertical flow divider is required for the piping connections of 2 or more individual flow divide controllers for 1 module, use the "flow divider pipe set" for vertical divides.

● Flow divider pipe set for vertical divides Part No. DIS-V1KXR3-E

Note (1) Insulation is provided to all flow divider pipes.
 (2) Cut off the flow divider pipes in the center to match the diameter of the piping used on site.

(1)Precaution in electric wiring

(2)Wiring system Diagram [1/2] [2/2]

(3)Indoor and outdoor signal wiring

(4)Remote controller wiring

3.2 Electric wiring

(1) Precaution in electric wiring.

(a) Use separate power supplies for the outdoor and indoor units respectively (Standard specification)

(b) Signal wiring (for indoor and outdoor units)

- Double-core cable with a diameter 0.75 to 2 mm² should be used for the signal wires.
- **Never make the indoor and outdoor connecting signal line use “co-axial cable” or “strand” with the power wiring for indoor and outdoor unit and other power line.**

(Never use a multiconductor wire together with power line. It may cause erroneous operation.)

- Do not connect high voltage wires 220/240 V or 380/415 V to signal wires. as these wires are DC 5V. Signal wires should be connected so that the terminal Nos. conform with each other for between outdoor and between indoor units. However, they will work properly if different polarities are connected.

(Connect (A) and (A), (B) and (B).)

- **Do not strand or run the remote control cord with power line, electric line, etc.**

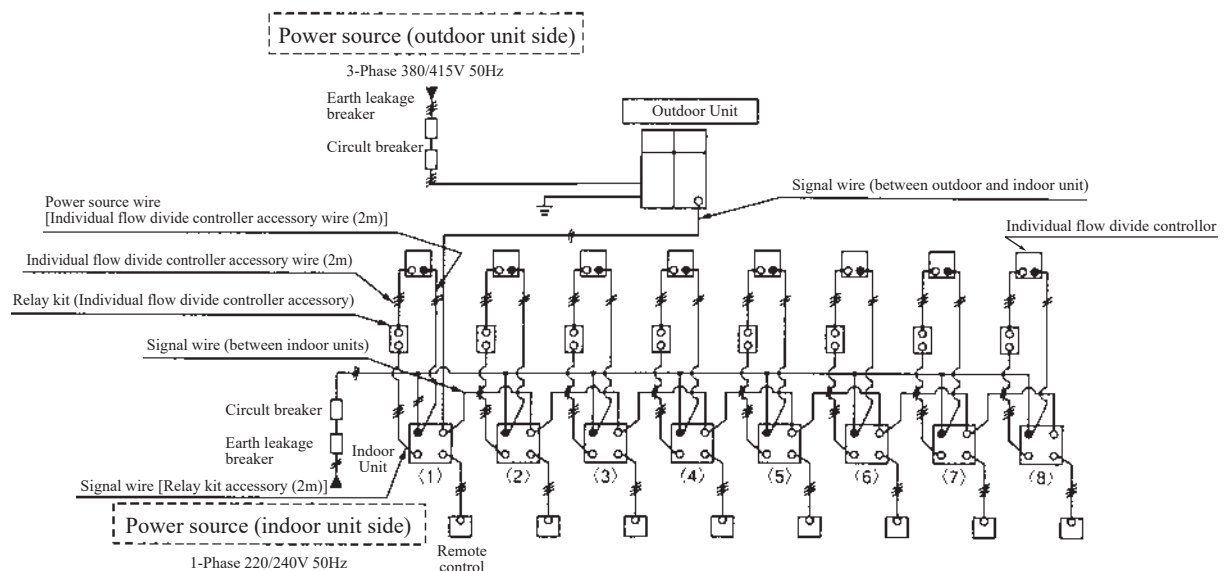

- The total length of the signal wires Should be 1000m or less.

- **Recommended signal wire list**

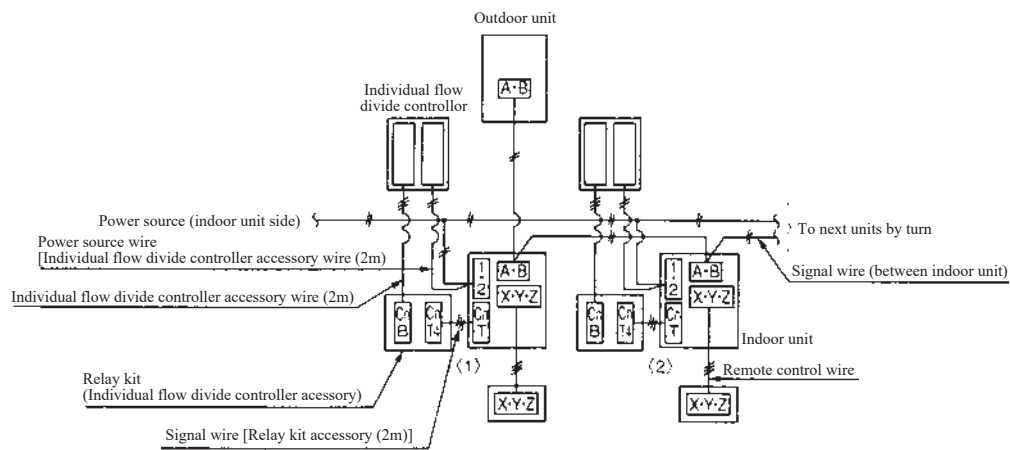

No.	Name	Symbol
1	Vinyl cabtire round cord	VCTF double-core 0.75 to 2 mm ²
2	Vinyl cabtire round cable	VCT double-core 0.75 to 2 mm ²
3	Control vinyl insulated, vinyl sheathed cable	CVV double-core 0.75 to 2 mm ²
4	Shielding wire	MVVS double-core 0.75 to 2 mm ²

When No. 4 shielding wire is used, always ground the single wire side of the shielding wire . In addition, using the shielding wire is helpful to prevent the incorrect connection between 5V DC and 220/240V or 380/415V AC because the discrimination from the power supply wire is clear.

(2) Wiring system Diagram

Outdoor/Indoor units connection procedures

Signal wire

- Do not connect high voltage wire 380/415V to signal wires, as these wires are DC 5V. Signal wires should be connected so that the terminal Nos. conform with each other for between outdoor and between indoor units. However, they will work properly if different polarities are connected. (Connect (A) and (A), (B) and (B).)

(3) Indoor and outdoor signal wiring

(a) If only one Outdoor unit is used

Notes (1) The indoor and outdoor signal wiring are without polarity

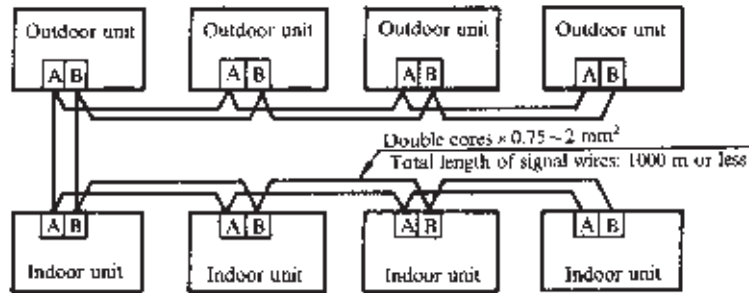

Either of the above wiring is correct.

(2) For connection to the terminal block, use as M3.5 (5/32) round eye-let terminal is shown below.

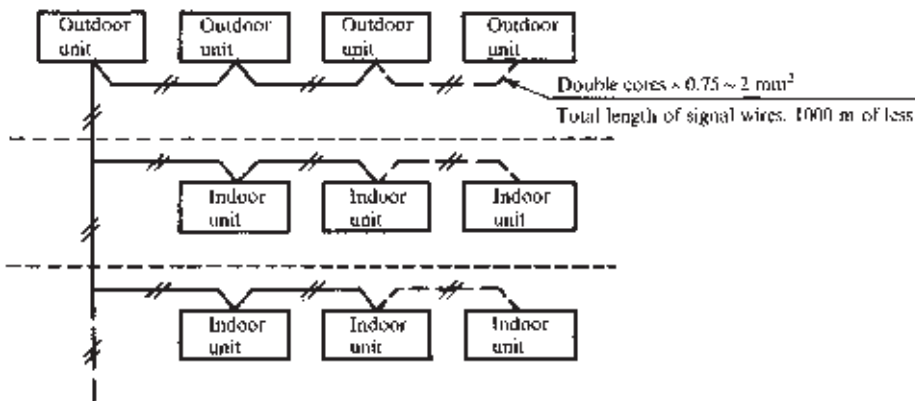

(b) If plural outdoor units are used

1) A maximum of 48 indoor units can be connected by using the crossover wiring method, with 2 wires for each side of the outdoor and indoor units.

2) Indoor/outdoor wiring method for multiple floors.

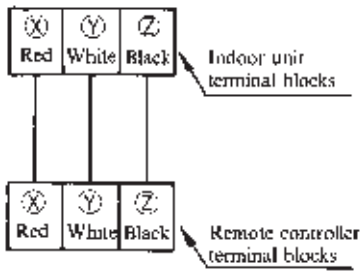

3) Loop wiring is inhibited

(4) Remote controller wiring

(a) Wiring for controlling only one indoor unit.

Note (1) Cables for the remote controller have polarity. Be sure to connect terminal blocks with the same numbers. If mis wiring occurs, E1 is displayed and disables the unit operating.

(b) When controlling plural units.

1) Use the same procedure shown in the drawing above for the wiring of the power supply, both indoor and outdoor units and remote controller

When the wiring length for the remote controller exceeds 100 m, use the wiring procedure shown in the drawing below.

2) Connect each of the indoor units for group controlling (3 cables)

a) Connect the cables to the terminal blocks of X, Y, and Z for the indoor unit remote controller. Since the cables have polarity, be sure to connect them to terminal blocks with the same numbers.

b) Use cables of more than 0.5 mm² (Flexible and easily moved)

c) The total length of cables for crossover connection and the remote controller should be less than 600 m.

Allowable rang of wire thickness and length

Standard	Within 0.3mm ² × Within 100m
	0.5mm ² × Within 200m
	0.75mm ² × Within 300m
	1.25mm ² × Within 400m
	2mm ² × Within 600m

3) When there is more than one outdoor unit, they can be controlled by one Remote controller.

4) One remote controller is capable of controlling up to 16 units in group.

Notes (1) Use shielded cables, when wiring in parallel with cables for other power supply or when there is a possibility of being affected by outer noise such as noise from a high-frequency unit.
