WHAT IS NEW?

This standard specifies requirements and gives recommendations for the design, installation and maintenance of fixed fire sprinkler systems in buildings and industrial plants. This standard includes also particular requirements for sprinkler systems, requirements which are requested for *life protection*.

This European Standard is based on the experience of good engineering rules from several European Countries and establishes several safety guarantees. The Standard EN12845 is the first step towards an attempt of European harmonization.

The Fire Set designed and assembled according to the European Standard EN12845 provides a *higher degree of reliability*.

This European Standard, shall be given the status of a national standard, either by publication of an identical text or by endorsement, and conflicting national standards shall be withdrawn at the latest by September 2007.

The European Standard EN12845 has been translated in Italian language and has replaced the previous Standard UNI 9489 UNI 9490 (Fire Fighting equipment – Water supply for automatic fire fighting systems).
