## 13.1 GENERAL INFORMATION

### 13.1.1 Specific features

- (1) Less refrigerant charge amount due to use of double phase refrigerant flow system. The total refrigerant charge amount has been reduced by more than 50%.
- (2) The indoor outdoor interconnection signal wiring has been done away with. The microcomputer chip is installed in the indoor unit. There is no need for the unit to communicate between the outdoor and indoor units so the unit is more resistant to electromagnetic noise thus the incidence of microcomputer malfunction has been reduced. The compressor in the outdoor unit has its own self protection function, that reacts according to abnormal high pressure and excessive high temperature.
- (3) There are only four power line between the outdoor and indoor unit. As no signal wire is used there is no need to separate the power line from the signal line. One cab tyre cable with 4 wires encased in one sheath is enough for conducting the wiring work between the outdoor unit and the indoor unit. This contributes to simpler wiring work in the field.
- (4) The operation modes are only cooling and fan operation for easier control.
- (5) All air supply ports have auto swing louvers. The indoor fan motor has two speeds of high and low.
- (6) The controls are wireless residential split air conditioner type remote controller with 4 malfunction modes.
- (7) All models have service valves protruding from the outdoor unit for faster flare connection work in the field.

#### (8) Aero trap louver

- (a) Pleasantness will be enhanced with the employment of aero trap louver. It has an excellent wind orientation and a homogeneous air conditioning feeling is ensured at every corner in a room with the auto swing blasting which can be adjusted the maximum 70° downward.
- (b) Louver angle can be adjusted to 4 fixed positions with the remote control. It can be adjusted at any optional angle during the manual operation. Sidewise blast is adjustable by 40° in each direction.

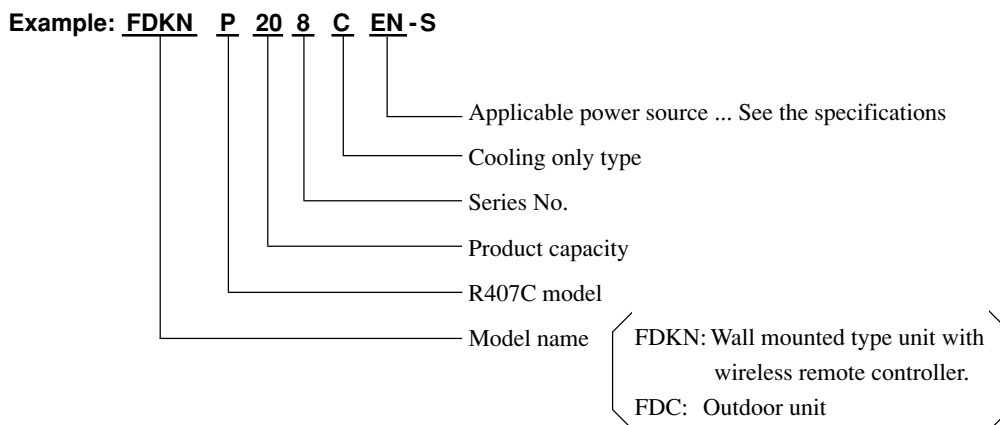

#### (9) Low noise

Specially developed silent fan is employed. A very gentle operation sound is assured because the noise like wind slashing sound are suppressed effectively.

#### (10) Thin and compact design

The unit measures 17.9 cm (208 type) or 19.6 cm (258, 308 type) in thickness and its size is so compact as a room air conditioner. Body of the unit is finished in the ivory white color and a pleasant and simple design produces a very pleasant harmony for the interior design.

### 13.2.6 Selection chart

Correct the cooling capacity in accordance with the conditions as follows. The net cooling capacity can be obtained in the following way.

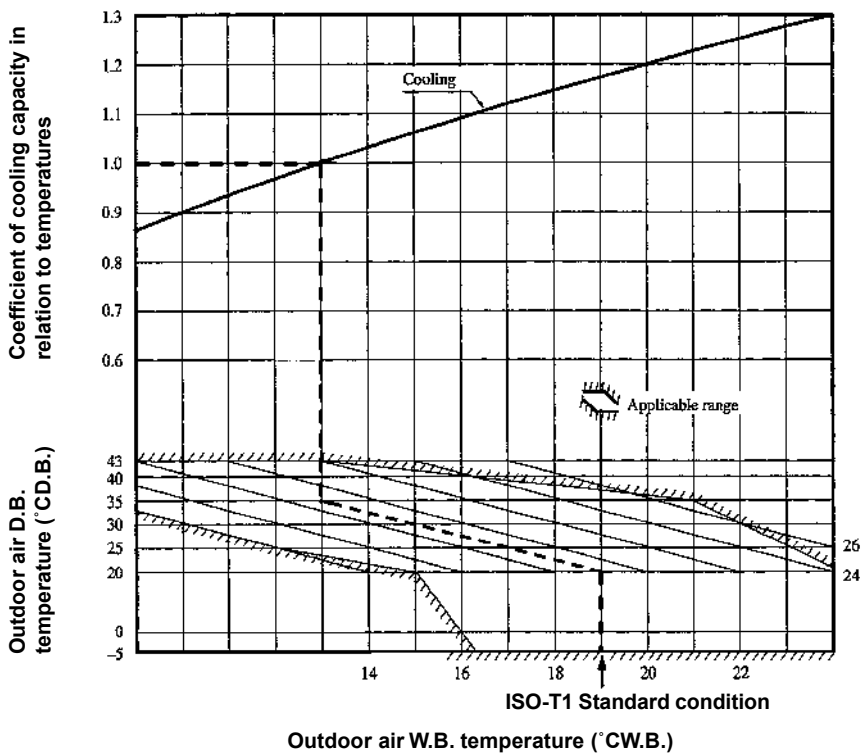

**Net capacity = Capacity shown on specification × Correction factors as follows.**

**(1) Coefficient of cooling capacity in relation to temperatures**

**Models FDKNP208CEN-S, 258CEN-S**

**Models FDKNP308CEN-S, 308CES-S**

**Table of bypass factor**

Model		FDKN208C	FDKN258C	FDKN308C
Air flow	Hi	0.03	0.03	0.04

**(2) Correction of cooling capacity in relation to flow rate control (fan speed)**

**Coefficient: 1.00 at High, 0.95 at Low**

**(3) Correction of cooling capacity in relation to one way length of refrigerant piping**

It is necessary to correct the cooling capacity in relation to the one way equivalent piping length between the indoor and outdoor units.

Equivalent length <sup>(1)</sup> m		5	10	15	20	25	30	35	40	45	50	55
<b>Cooling</b>	208 type	1.0	0.995	0.995	0.99	0.985	0.985	0.98	-	-	-	-
	258 type	1.0	0.995	0.99	0.985	0.98	0.975	0.97	-	-	-	-
	308 type	1.0	0.99	0.98	0.97	0.96	0.95	0.94	0.93	0.92	0.91	0.9

Note (1) Equivalent piping length can be obtained by calculating as follows.

208, 258, 308 series [φ15.88(5/8")]: Equivalent piping length = Real piping length + (0.10 × Number of bends in piping)  
 [Equivalent piping length < Limitation length of piping + 5m]

**(4) When the outdoor unit is located at a lower height than the indoor unit in cooling operation,** the following values should be subtracted from the values in the above table.

Height difference between the indoor unit and outdoor unit in the vertical height difference	5m	10m	15m
Adjustment coefficient	0.01	0.02	0.03

**Piping length limitations**

Item	Model	FDKNP208, 258 type	FDKNP308 type
<b>Max.one way piping length</b>		30m	50m
<b>Max.vertical height difference</b>		20m(Outdoor unit is higher) 15m(Outdoor unit is lower)	30m(Outdoor unit is higher) 15m(Outdoor unit is lower)

Note (1) Values in the table indicate the one way piping length between the indoor and outdoor units.

**How to obtain the cooling capacity**

**Example :** The net cooling capacity of the model FDKNP308CEN-S with the air flow "High", the piping length of 15m, the outdoor unit located 5m lower than the indoor unit, indoor wet-bulb temperature at 19.0 °C and outdoor dry-bulb temperature 35 °C is

$$\text{Net cooling capacity} = \underset{\substack{\uparrow \\ \text{FDKNP308CEN-S}}}{7100} \times \underset{\substack{\uparrow \\ \text{Air flow "High"}}}{1.00} \times \underset{\substack{\uparrow \\ \text{Length 15m.} \\ \text{Height difference 5 m}}}{(0.98 - 0.01)} \times \underset{\substack{\uparrow \\ \text{Factor by air} \\ \text{temperatures}}}{1.0} = \mathbf{6887 \text{ w}}$$

### 13.2.7 Noise level

Notes (1) The data are based on the following conditions.  
 Ambient air temperature:  
 Indoor unit 27°C DB, 19°C WB  
 Outdoor unit 35°C DB,

**Indoor unit**
