Panasonic

DG-H Series

G series direct-fired LiBr absorption chiller/heater

China · Dalian Sanyo Refrigeration Co.,Ltd.

Sanyo LiBr absorption chiller/heater DG-H series

Dalian Sanyo G Series Enhancement Model
Energy saving nonesuch · Safe guarantee

Business scope:

Designs, productions, manufactures, sales, installations, and after-sale services for chillers featuring environmental protection and energy-integrated utilization, for air-conditioning machinery, and for related environmental protection machinery, etc.

Product kinds:

- Central air-conditioning equipment: absorption chiller/heater — sole refrigeration or refrigeration and heating (70~23256kW).Steam-fired, direct-fired, hot water-fired, modular type, packaged type, heat pump type, etc.
  Electric refrigeration screw chiller — air conditioning refrigeration and ice storage (281~2461kW).
- Commercial air-conditioning equipment: GHP gas heat pump and chiller unit — refrigeration and heating (10HP-60HP).
  VRF variable refrigerant flow unit — refrigeration and heating (8HP-60HP).
- Heating equipment: vacuum boiler — heating and hot water supplying (80,000~6,000,000kcal/h).

Application:

- Central air-conditioning equipment: mainly provide heating and cooling source for large scale central air conditioning system and other places needing chilled or hot water, widely applied in building, hotel, department store, cinema, stadium, factory and oil field, etc.
- Commercial air-conditioning equipment: widely applied in places needing air conditioning equipments, such as small and middle scale department store, hotel, building, entertainment place, hospital, factory, domitory, residence,school,etc.
- Heating equipment: widely applied in hotel, department store, residence, villa, bath house , advanced swimming pool, etc., where needing heating and hot water, used with absorption chiller, it will be ideal for cooling, heating and hot water supplying.

Advantages

★ **Brand advantage**

International well-known brand, create the new epoch that China LiBr absorption chiller technology develop.

★ **Technology advantage**

It is the accumulation that Japan Sanyo's technology,design, manufacturing and quality in the past 50 years.

★ **Quality advantage**

The unique enterprise in the industry that have the honor to get "National Quality Management Surpassing Enterprise" award, which is the approval of quality management and the guarantee of high quality for Sanyo products, and only have nine enterprises to get this honor in China.

★ **Service advantage**

Super express after-sales service mode. Preventive service instead of previous emergency service.

Characteristics

High efficiency & Energy saving
Run economy
Environment friendly
Safe and reliable
Intelligent design
Network management

ISO9001 Quality Control System Certificate
ISO14001 Environment Control System Certificate
GB/T28001 Vocation Health Safety Certificate

CRAA Certificate

ASME Certificate

UL Certificate

CE Certificate

JIS B 8622 Technical Standard

PED Certificate

JIS B 8622-2002 Technical Standard

China Mechanical Safety Certificate

China Environment Mark

National new hi-tech corporation

Core member of China Coalition for Decentralized Energy

National quality management surpassing enterprise

National customer satisfactory product

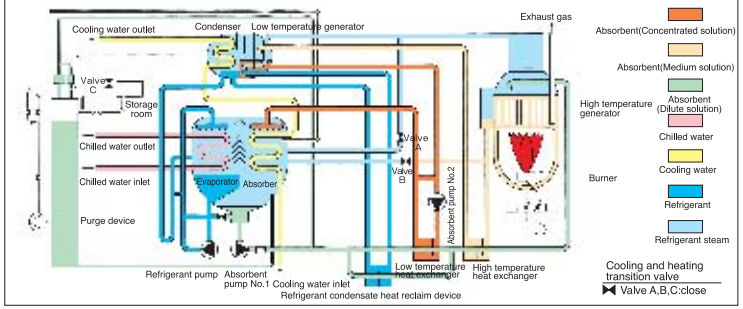
Postdoctoral scientific effort station

Energy-saving products in government procurement list

Strong Technology and Quality Guarantee

Absorption chiller/heater flow diagram

Cooling operation



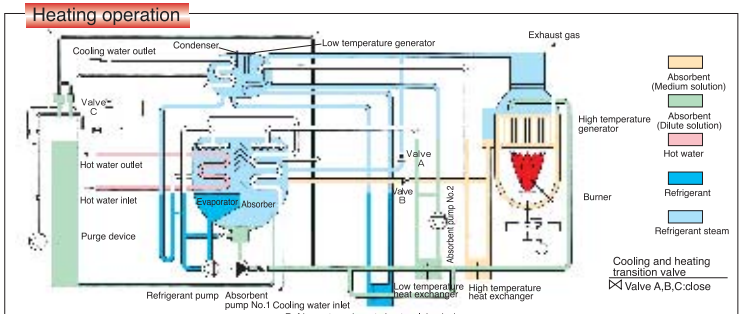
Our G series direct-fired LiBr absorption chiller/heater is made of evaporator, absorber, condenser, low temperature generator, high temperature generator, refrigerant condensate heat reclaim device heat exchanger, solution pump and refrigerant pump etc.

Principle of operation: chilled water is cooled in evaporator by low temperature refrigerant which has been decompressed and throttled from condenser, and the refrigerant is turned into vapour after absorbing the heat of chilled water, then is absorbed into absorber where the concentrated solution is turned into dilute solution.

The dilute solution in the absorber is pumped through refrigerant condensate heat reclaim device, low temperature heat exchanger, high temperature heat exchanger where the solution temperature goes up, to the high temperature generator at last, where the dilute solution is heated and condensed into medium solution.

The medium solution flows through high temperature heat exchanger, into low temperature generator where the medium solution is heated by the refrigerant vapour which from high temperature generator and turned into final concentrated solution. The concentrated solution flows through low temperature heat exchanger where the temperature goes down, then into the absorber and is sprayed on the cooling water tubes where it absorbs the refrigerant vapour from evaporator and is turned into dilute solution. On the other hand, the vapour in the high temperature generator produced by heating lithium-bromide solution, floats into low temperature generator where it heats the medium solution and itself is coagulated into refrigerant through the refrigerant condensate heat reclaim device where the temperature goes down. Then the refrigerant floats into condenser with refrigerant vapour from low temperature generator and is cooled into refrigerant after being decompressed and throttled in the condenser. After that, the refrigerant flows into evaporator where it is sprayed on the condensed coils, cool the chilled water in the evaporator. Above process circles again and again for producing chilled water continuously.

Heating operation



Diluted absorbent is reheated in high temperature generator and becomes refrigerant vapour. Refrigerant vopour goes to evaporator and absorber and exchange heat in evaporator to get hot water. And, medium absorbent goes into absorber and mixes with refrigerant and is diluted. Then it passes refrigerant condensate heat reclaim device, low, high temperature heat exchanger and goes back to high temperature generator.

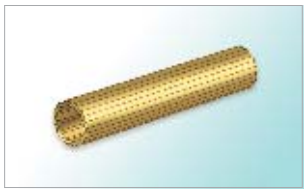
Above process circles again and again for producing hot water continuously.

Energy saving technology new nonesuch

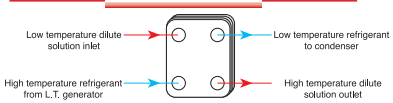
Adopt new style high efficient heat exchange tube

Evaporator: Enlarge heat exchange area, strengthen heat exchange effect, and increase the heat efficiency by 10%

Absorber: Strengthen the external absorbing of pipe and increase turbulent disturbance in the pipe to prevent scaling.



Adopt new style patent refrigerant condensate heat reclaim device



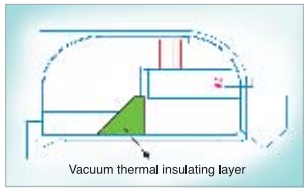
- Fully utilize the heat quantity of refrigerant condensate to increase the heat efficiency by 10% and decrease the heat load of cooling water.
- Increase the dilute solution temperature of the low temperature heat exchanger outlet to make solution circuit far from crystal area, so make sure the machine operation is more safe and reliable.

Adopt new style high efficient heat exchanger

- Low temperature heat exchanger adopts plate-type heat exchanger to increase the heat efficiency of the machine.
- High temperature heat exchanger adopts new style multipaths heat exchanger to increase the heat exchanger greatly.

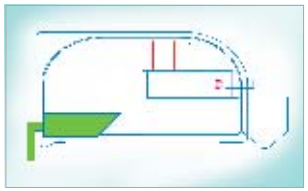
H.T. generator cold-state regeneration technology.
Temperature is low and heat exchange efficiency is high

Inside of the upper shell is installed the vacuum thermal insulating layer to decrease inside loss



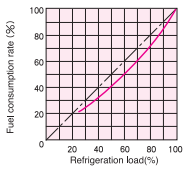
Internal refrigerant self-adapting cold storage device

- Adapt change in load and supply the refrigerant of evaporator automatically.
- "Cold storage", save energy running farthest.
- Shorten the starting time of machine.
- Shorten the dilution running time.
- Adapt the more lower cooling water inlet temperature.
- Prevent "cavitation" of the refrigerant pump to prolong the pump operating life.



Design tailored for partial load, the machine realizing high efficient energy saving operation

Suits low load operation of 40-80%, adopts new frequency conversion control system, internal refrigerant self-adjusting cooling storage device, quick heat state balance circulation technology, obviously saves partial load and start time energy consumption, Integrated Partial Load Value (IPLV) rises greatly.

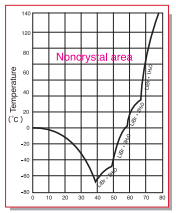


Test condition
1.Chilled water outlet temperature 7℃ fixed
2.Cooling water inlet temperature

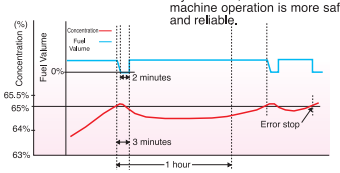
Load (%)	Temperature ℃
100	32
50	27
30	25

Energy saving technology new nonesuch

Multi crystallization prevention safety control



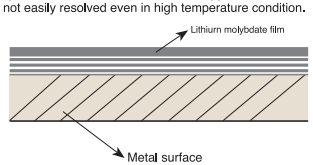
Micro-computer monitors and calculates the solution concentration automatically to make the solution circuit far from crystal area, and adjust solution flowrate and fuel volume automatically to prevent crystallization completely.
High temperature generator cold-state regenerator technology. Temperature is low and running is safe.
Adopt new style patent refrigerant condensate heat reclaim device to increase the dilute solution temperature of the low temperature heat exchanger to make solution circuit far from crystal area, so make sure the machine operation is more safe and reliable.



Overall anti-corrosion safety design

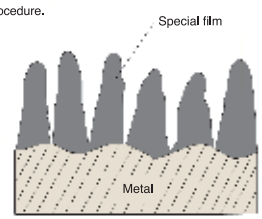
- Adopt Sanyo patent LiBr solution
- Adopt lithium molybdate as inhibitor

Lithium molybdate inhibitor is safe and no harm to environment, and form protection film on the surface of copper tube and steel plate and not easily resolved even in high temperature condition.



- Material processing use Sanyo patent Pachuca technology

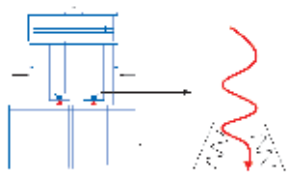
Remove the grease and rusty spot of material surface completely to form compact and uniform safety film through eighteen different procedure.



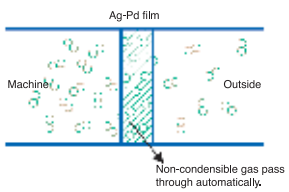
New bow wave spray Ag-Pd automatic purge device

- Five vacuum keeping design

1. Bow wave type spiral spray nozzle.
2. New patented upper/down shell factional pressure gas/steam separator, utilizing lowering pressure de-air technology.
3. Ag-Pd tube automatic exhaust.
4. Storage room lowering-pressure to enlarge capacity design.
5. Upper/down shell two purge system.



Spray nozzle structure



Ag-Pd tube working principle

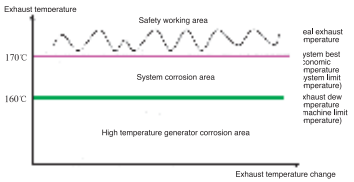
H.T.Generator adopts more capacity splitter design to prevent refrigerant pollution

Cooling water safe operation scope is more extensive

Micro-computer monitors the cooling water temperature to adjust the fuel consumption and solution circulation automatically, which make the cooling water operate even in the temperature range of 15～34°C.

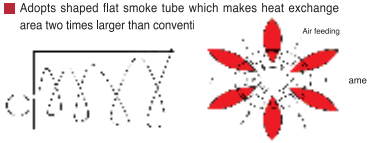
Cross limit exhaust temperature design

Chiller's exhaust lowers to combine operation cost and life of machine and system in a best way.



Adopt special structure to lower exhaust temperature

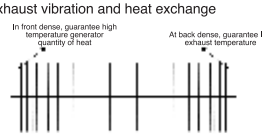
- Adopt new combustion mode to raise heat exchange affect and lower NOx exhaust.
- Tailored burner design, modulation,and self-diagnosis function.
- Adopts shaped flat smoke tube which makes heat exchange area two times larger than conventi



Whirl wind air feeding combustion (Oil-fired)

Partitioned flame combustion(Gas-fired)

- Adopt new uneven spacing spoiler to enhance exhaust vibration and heat exchange



Uneven spacing

Unique high temperature generator process, safe and reliable operation

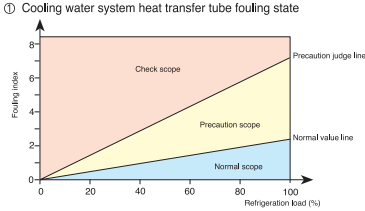
- Use negative pressure fixing resistant steel to prevent high temperature generator sinking down.
- Smoke tube is treated by Parca process to resist corrosion.
- Smoke tube is welded from both sides to prevent effectively electric-chemical corrosion.

New speed type PID control, accuracy much higher

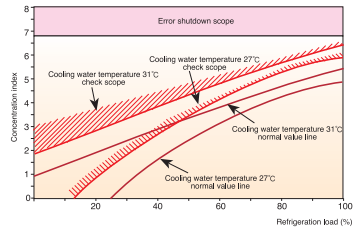
Replace the original position-type PID control to make the accuracy much more higher and can be quick responsive to sudden load change.

Self-diagnosis professional function on the machine

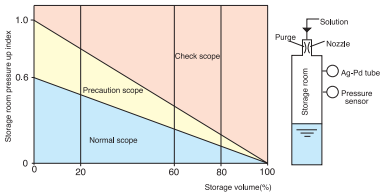
① Cooling water system heat transfer tube fouling state



② Absorbent concentration up trend



③ Vacuum state time monitor



④ Sweeping signal of combustion room

According to exhaust temperature of combustion room, precast whether there is necessary to sweep burning system of high temperature gererator.

Intelligent micro-computer control system

Adopt Japan Sanyo patent micro-computer intelligent control system, which broke through the traditional control system. Sanyo is the first enterprise that introduces the fuzzy control and expert control technology to the LiBr absorption central air-conditioning control system, which include many intelligent softwares, such as automatic load regulator, self-diagnosis, maintenance precognition, expert save energy software,etc.

Flue connection			mm	280×210	280×210	280×210	280×210	310×310	310×310	310×310	310×310	360×310
Clearance			mm	2,400	2,400	3,400	3,400	3,400	3,400	4,500	4,500	4,500

Note: (1) 1 USRT=3,024kcal/h=3.52kW

(2) Max. working pressure for chilled/hot water and cooling water system: 8kg/cm² · G. High pressure model is available, dimension and foundation may be changed,so please enquire with the manufacturer.

(3) Range of chilled/hot/cooling water flow:50～120%.

(4) The burner parameter listed in the table vary with the burner model. For the detail parameter, please see the ex-works file.

(5) The burner will affect the overall dimension of the chiller/heater. For the actual overall dimension, please refer to the ex-works file.

(6) The heat values in the table are low heat values:light oil 43.53MJ/kg,city gas 15.91MJ/Nm³,natural gas 46.05MJ/Nm³

The consumption of fuel of heat values not specified in the table= $\frac{\text{low heat valule specified in the table}}{\text{low heat value of the fuel}}$ × consumption in the table.

(7) Heating capacity can be enlarged by 4 ranks as required.

(8) "A" stands for nominal diameter, unit is mm.

(9) Gas pipe dimension is changing with gas heat value, pressure etc. The value specified in the table is for natural gas, heat value 46.05MJ/Nm³, specific gravity 0.64, DG-E11H~E42H low pressure 200mmH₂O, DG-E51H~E82H middle pressure 1kg/cm² · G, If there is any deviation, please contact Dalian Sanyo when placing order. For specific details, refer to Ex-works File.

(10) Implementation standard JISB8622.

(11) And, the values in above table may be modified without notice.

Order scope

Item		Standard specification	Option
Chilled water System	Flow rate	0.605m³/h · RT (△t=5℃ constant quantity)	Range of variable flow: 50～120%
	Temperature	12 / 7℃	Special inlet/outlet temperature of chilled water
	Water quality	Tap water (according to JRA9001)	Industrial water, well water
	Max.working pressure	8kg/cm² · G	Pressure1…10kg/cm² · G Pressure2…14kg/cm² · G Pressure3…16kg/cm² · G Pressure4…18kg/cm² · G Pressure5…20kg/cm² · G
Cooling water system	Flow rate	For the detail information, please see the specification table.	Range of variable flow: 50～120%
	Temperature	32/37.5℃(Lower temperature limit: 15℃)	Inlet temperature:15~34℃
	Water quality	Tap water (according to JRA9001)	Industrial water, well water
	Max.working pressure	8kg/cm² · G	Pressure1…10kg/cm² · G Pressure2…14kg/cm² · G Pressure3…16kg/cm² · G Pressure4…18kg/cm² · G Pressure5…20kg/cm² · G
Hot water system	Flow rate	0.605m³/h · RT (△t=4.2℃ constant quantity)	Range of variable flow: 50～120%
	Temperature	55.8/60℃ (40~65℃)	Outlet tempereture above 60℃, please enquire with the manufacturer.
	Water quality	Tap water (according to JRA9001)	
	Max.working pressure	8kg/cm² · G	Pressure1…10kg/cm² · G Pressure2…14kg/cm² · G Pressure3…16kg/cm² · G Pressure4…18kg/cm² · G Pressure5…20kg/cm² · G
Installation place	Place	In machine room	Storage of equipment shall be in accordance with the standard,details refer to factory documents.
	Installation	Body anti-rusting paint (exclusive of heat or cooling insulation,final paint).	
	Ambient Temperature	5～40℃	
	Ambient Humidity	Relative humidity: below 90%	
Package	DG-E11H~E53H	One-section	
	DG-E61H~E82H	Moving separately	
Power	Frequency, Voltage	3φ / 380V / 50Hz	Special voltage
	Voltage regulation	Within ± 10%	
Electric wiring	Electric allocation	Control: cable	
		Power: cable	
Main body safety device	Type	· Refrigerant supervision function · Chilled water freezing protection function · H.T. generator temperature supervision function · H.T. generator pressure supervision function · Exhaust temperature supervision function · H.T. generator solution level supervision function · Motor protection function · Extreme low temperature of cooling water · Chilled/hot water flow switch · Crystal protection function	Cooling water flow switch
Capacity control device	Mode	Digital PID control by chilled/hot water inlet temperature Inverter control of No.1 absorbent pump	
Control panel	Paint color	Munsell 5Y-7/1 (half smooth)	
	Display	LCD Chinese display	
	Outside wiring terminals	Operation indication ····· point a. Stop indication ····· point a. Alarm indication ····· point a. Auxiliary equipment operation ····· point a. Start confirmation ····· point a. Burn confirmation ····· point a. Cooling operation indication ····· point a. Heating operation indication ····· point a.	
Purge device	Mode	Liquid injector make non-condensible gas be stored in the slot and palladium pipe exhaust continuously hydrogen	Fully automatic purge
Burning device	Safety stop valve	Full automatically double stop	
	Fuel scope	Gas: 25%~100% Oil: 30%~100%	
Fuel	Oil	Light oil	
	City gas	Low pressure: 100~200mmH₂O DG-E11GH~E22GH Intermediate pressure: 500~2000mmH₂O DG-E11GH~E42GH Middle pressure: 1~3kg/cm² · G DG-E11GH~E82GH	
	Natural gas	Low pressure: 200mmH₂O DG-E11GH~E42GH Intermediate pressure: 500~2000mmH₂O DG-E11GH~E82GH Middle pressure: 1~3kg/cm² · G DG-E11GH~E82GH	
	Customer support	Please provide heat value, pressure, specific gravity, component, ect. of gas when placing order.	
Water system	Frequency conversion		Frequency controller

Supply scope

Item		Deliver construction	Customer construction	Note
Body	Absorption Chiller/Heater	○		Reference to the caption below the chart
Transportation and Installation	From the factory to the building		○	
	From the building to the foundation site		○	
	Installation of chiller/heater		○	
	Testing and adjusting at site	●	○	
	Operating direction	○		
Electric Construction	External electric allocation		○	Please wire to the terminal inside the control panel
	Cooling water temperature control device		○	Please install and wire for the thermostat used by start-stop fan of cooling tower or for the thermostat of cooling water control valve.
Other Construction	Foundation construction		○	Exclusive of foundation bolts, weld the frame and washer when fixing foundation bolts.
	External pipe construction		○	Exclusive of coordinate flanges
	Pipe anti-freezing	○		Take anti-freezing of pipe and water into consideration at rest in winter
	Water quality management of cooling water		○	Install water drainage device in order to have a proper water quality management
	Heat or cooling insulation construction		○	
Painting	Main body primary coat	○		Anti-rusting primary coat
	Control panel painting	○		Munsell No.5Y-7/1(half-smooth)
Others	Assembly power,water, etc. at site		○	
	Power, water and fuel, etc. used during trail run		○	
	Lithium-Bromide solution,refrigerant	○		

Absorption chiller/heater main body includes

1. Absorption chiller/heater:
(a) Machine of refrigeration and heating cycle including evaporator, absorber, high temperature generator, low temperature generator, condenser, refrigerant condensate heat reclaim device, heat exchanger, and pump, etc.
(b) Purge device
(c) Capacity control device
(d) Combustion equipment including burner, air blower and safety-burning device, etc.
(e) Safety device
(f) Control panel
(g) Absorbent and refrigerant
(h) Internal piping and electric wiring
2. Accessory
a. Foundation bolts and washers……1 set
b. Instruction manual……1 set
● Extra charge should be calculated separately if required.

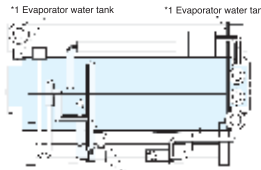
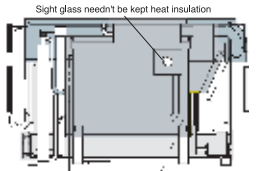
Heat/cooling insulation area

Heat/cooling insulation area





Part *1, *2 can be removed

100mm heat insulation: high temperature generator.

75mm heat insulation: low temperature generator, steam pipe, etc.

30mm heat insulation: heat exchanger, connecting pipes, etc.

50mm cooling insulation: evaporator, evaporator water tank, etc.

30mm cooling insulation: upper part of refrigerant pump, connecting pipes, etc.

- Heat insulation material: glass fibre, asbestos and the like.
- Cooling insulation material: polythene foam and the like.
- Heat/cooling insulation total area includes machine pipe area .
- Please use non-combustible as heat/cooling material.
- In above drawing, DG-E11H～E63H is indicated. For others detail, see ex-works file.

Partition / Insulation thickness / Model	Heat insulation area(m^2)			Cooling insulation area(m^2)

Moving dimension

Moving wholly

Note:

1. When moving the machine separately, remove the control panel and discharge the solution before ex-works.
2. When calculating inlet height, add height of support and rolling log to the H.
3. When hoisting, keep as horizontal as possible.

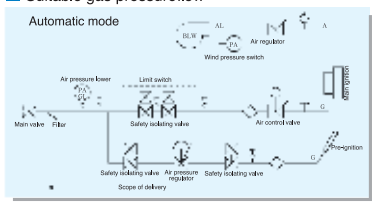
Note: Above values are for reference, contact Dalian Sanyo for specific requirement.

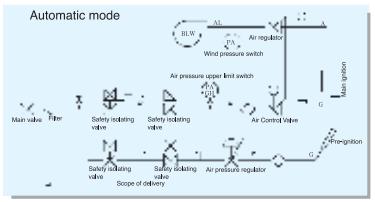
Combustion system scheme

Gas-fired

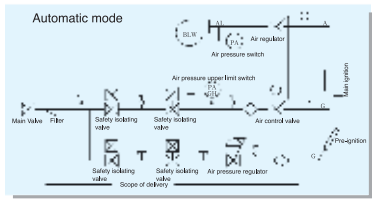
Suitable gas pressure:low



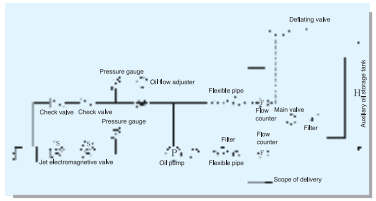
Suitable gas pressure: intermediate



Suitable gas pressure: medium



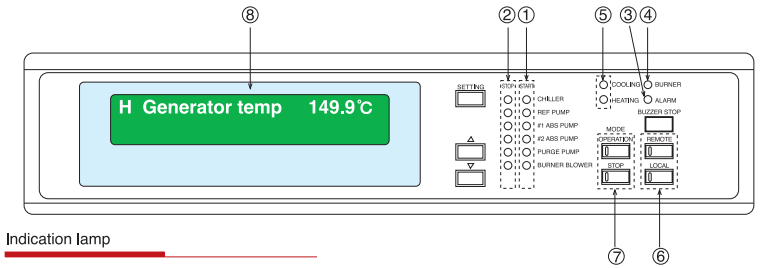
Oil-fired



Note:

1. Exit filter of auxiliary oil storage tank should be set above 80 gride-holes.
2. Deflating valve should be installed in the pipe where air is stored.
3. Backflow pipe of auxiliary oil storage tank must be installed.
4. Valves must not be set in backflow pipe.
5. Oil level of auxiliary storage tank should be set not lower than 4 meters below pump site.
   * Pump pressure on absorbing side should be set 0 ~ 0.35kg/cm² · G.
   * Height of backflow pipe (H) should be set below 5 meters.
6. Flow counter must be installed both in the feed side pipe and the backflow pipe.
7. Linkage pipe from auxiliary oil tank to oil joint should be heat , corrosion resistant and suitable for climate.

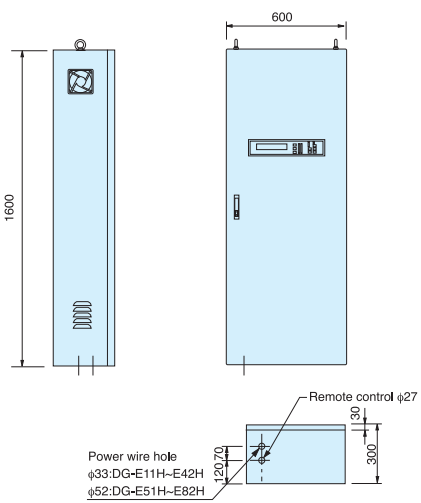
Control panel



Indication lamp

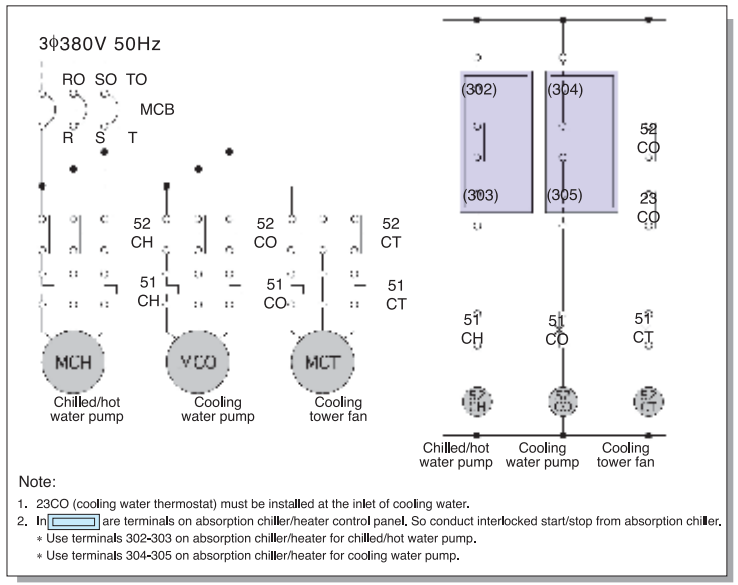
symbol	Name	Lamp color
①	Running(Operation) indication lamp	Red
②	Stop indication lamp	Green
③	Alarm indication lamp	Orange
④	Burner combustion indication lamp	Red
⑤	Cooling / Heating indication lamp	Orange
⑥	Remote / Local select button with lamp	Red
⑦	Mode select button with lamp	Red
⑧	Data display	LCD

Control panel dimension diagram



Accessory equipment electric circuit essential

Accessory equipment electric circuit reference example

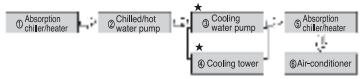


Note:

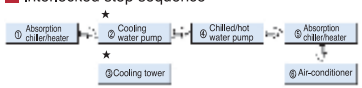
1. 23CO (cooling water thermostat) must be installed at the inlet of cooling water.
2. In ▭ are terminals on absorption chiller/heater control panel. So conduct interlocked start/stop from absorption chiller.
   * Use terminals 302-303 on absorption chiller/heater for chilled/hot water pump.
   * Use terminals 304-305 on absorption chiller/heater for cooling water pump.

Accessory equipment start/stop sequence

Interlocked start sequence



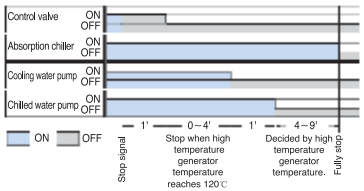
Interlocked stop sequence



Note:

1.Mark ★ means they don't start in heating operation
2.Please stop ⑥ Air-conditioner after absorption chiller/heater fully stopped.

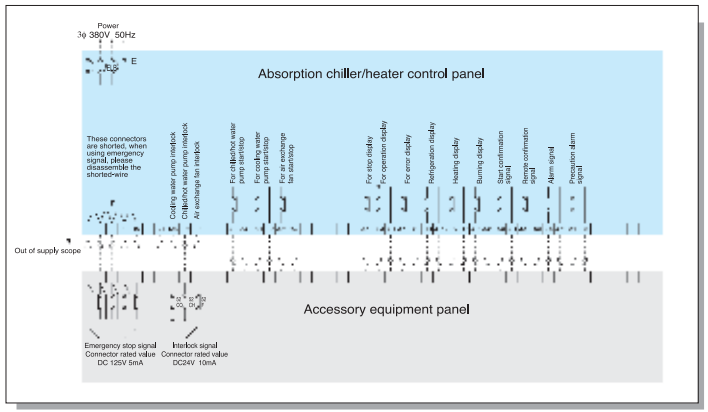
Chiller/heater dilution operation time chart



1.In cooling operation shortest dilution operation time is 6 minutes, longest 15 minutes.
2.In heating operation dilution operation time is 5 minutes.

Electric wiring diagram

Electric wiring diagram



Note: ＊ Start confirmation signal: the display after receiving the control signal from "Start" button
＊ Operation display signal: the display when the machine or the pump is running

Outside wiring

Accessory equipment wiring
Please connect user's power wire to the electric leakage breaker in the control panel, power wire earth line to earth terminals in the control panel

	Kinds	Terminal No.	Note
Accessory equipment interlock signal	Chilled/hot water pump interlock	171-136	DC24V 10mA
	Cooling water pump interlock	171-135	DC24V 10mA
Accessory equipment power supply	Chilled water pump operation	302-303	Connector specification AC250V 0.1A
	Cooling water pump operation	304-305	Connector specification AC250V 0.1A
	Air exchange fan	306-307	Connector specification AC250V 0.1A

Wiring of remote start/stop signal.

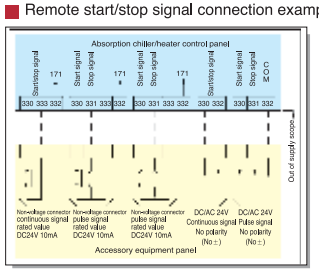
For remote start/stop, there are signals as follows, select when designing. When using non-voltage connector, please first connect terminals 171 and 332.

	Kinds	Input signal	Terminal No.	Note
1	Non-voltage connector continuous signal	ON/OFF	330-333	
2	Non-voltage connector pulse signal	ON	330-333	Use connector A
		ON	331-333	Use connector A
3	Non-voltage connector pulse signal	ON	330-333	Use connector A
		OFF	331-333	Use connector B
4	DC24V continuous signal	ON/OFF	330-332	No polarity (No ±)
5	DC24V pulse signal	ON	330-332	No polarity (No ±)
		ON	331-332	
6	AC24V continuous signal	ON/OFF	330-332	
7	AC24V pulse signal	ON	330-332	
		ON	331-332	

State display connector wiring.
Please prepare the following six state display connector.

	Kinds	Terminal No.	Note
1	Stop display connector	323-324	Connector specification AC250V 0.1A
2	Operation display connector	322-324	Connector specification AC250V 0.1A
3	Error display connector	320-321	Connector specification AC250V 0.1A
4	Start confirmation connector	300-301	Connector specification AC250V 0.1A
5	Alarm signal	326-327	Connector specification AC250V 0.1A
6	Precaution alarm signal	84-85	Connector specification AC250V 0.1A

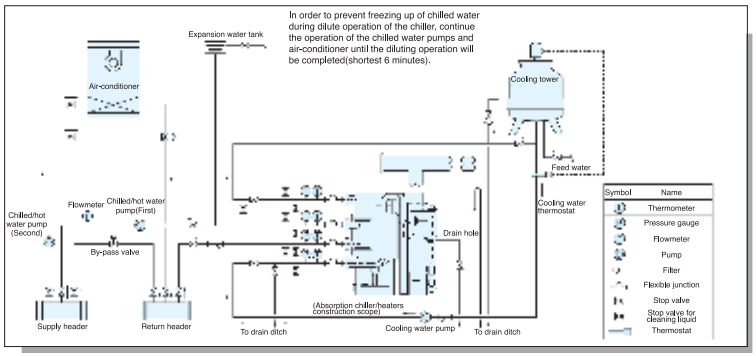
Remote start/stop signal connection example



You can select any method described above when designing.
Note: 1. when using non-voltage connector, please first connect terminals 171 and 332.
2. Connector rated value of non-voltage connector is DC24V, 10mA.

Piping system diagram

Piping system diagram (Reference example)



Attentions to pipe construction

1. Prepare external pipes connecting to the absorption chiller/heaters (dashed line) on your own.
2. Refer to the overall dimensions diagram and specifications table for pipe connections and diameters.
3. Try to make sure the chilled/hot/cooling water flowrate in conformity with standard value. Please keep the range of chilled/hot/cooling water flow between 50%～120% of specified value to prevent freezing, corrosion and leakage.
4. Please properly positioned the chilled/hot water pump, cooling water pump, expansion water tank in order to make the pressure on the body not exceed the set value.
5. Set special chilled/hot water pump and cooling water pump for each refrigerator with their capacity meeting the specifications.
6. Please make sure to install the flexible junction between the machine and the inlet/outlet of the chilled/hot water pump and cooling water pump, and make sure to have a straight tube on the chilled/hot water inlet/outlet pipe, which length is at least decuple pipe diameter.
7. Clean and descale the pipes through by-pass pipeline after installing the whole pipe system, then connect with the machine. Please make sure that the cleaning water cannot pass the machine.
8. The bad water quality could cause corrosion and fouling phenomenon, so please make sure to treat and manage strictly the water quality of chilled/hot water and cooling water system.
9. Install a cooling water flow regulate valve at the cooling tower inlet in order to manage the water quality.
10. Install filter in the chilled/hot, cooling water pipes(No. 10 filter screen).
11. Following devices should be equipped around the chilled/hot, cooling water inlet and outlet. exclusive of all kinds of stop valves in order to maintain and supervise chilled/hot water.

(1) Install thermometer and pressure gauge around the inlet and outlet of chilled/hot water and cooling water.
(2) Install deflating valve above water tank.
(3) Install drain valves at the lowest positions between the absorption chiller/heaters and the stop valves of chilled/hot water and cooling water,then pipe to the drain ditch.
(4) Install stop valves between the absorption chiller/heaters and stop valves of all inlets and outlets to clean the water circuit system with clean liquid.

12. Install the gas leakage detection alarm device for gas-fired type chiller/heater in the machine room. Make sure that the gas shut-off valve can close immediately when alarming and the exhaust fan of the machine room can automatically run when alarming.
13. When air flue and funnel is connected:

(1) Make insulate construction and drain holes.
(2) Avoid exhaust gas leak into the room and causing poisoning. Please confirm that the exhaust drain from the machine and the condensate pipe from the indoor units are not commonly connected.
(3) Avoid using the same chimney with garbage burning furance.
(4) Avoid backflowing to the machine at rest when common chimney is used by two more machine.
(5) Install vent regulator when static pressure in the flue is easy to change.
(6) Make the outlet of chimney far from the cooling tower.

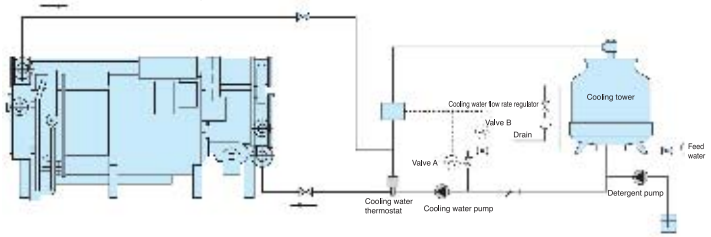
14. Please be sure to keep the foundation level (levelness within 2/1000mm)during installation of chiller.

Note: For the design and construction of the system and the machine room. Please follow the national relative air-conditioner design code, gas/oil-fired design and safety code,building fire-protection design code and fire requirements,etc.

Cooling water management essentials

Cooling water temperature control essential (Reference example)

Cooling water temperature can't drop 13℃ lower than design temperature.
For example, when cooling water inlet temperature is 32℃, cooling water temperature can't drop below 19℃.
However, it is no matter even the temperature below above value between start and normal run.



Prevention of cooling water temperature from droping too low:

1. Be sure to start and stop the fan by means of the cooling water thermostat.
2. Only in the cooling operation in summer, valve A can be used as hand-operated butterfly valve.
3. In the cooling operation in the middle region and in winter, valve A and valve B should be used as automatic valve(three-throw valve also can be used).The setting value of cooling water thermostat such as: below 22℃ shut down the valve, above 25℃ open the valve.

Manufacturer	Model	Temperature scope	Temperature difference	Switch
Yamatake Honeywell	T675A	-15℃～35℃	1.7℃～5.6℃	SPDT×1
SAGINOMIYA	TNS-C1034CW	−20～+35℃	4～20℃	SPDT×1

Cooling water quality supervise essential

- Moisture in the cooling water is vaporized and dispersed into the atmosphere when flowing through the cooling tower,therefore cooling water is continuously concentrated and deteriorated.
- If the cooling water quality deteriorated corrosion and dirt accumulation will arise, therefore the unit will be troubled with capacity declination and heat-transfer pipe corrosion.Please install cooling water overflow device to supervise the water quality properly. In addition, proper water quality treatment will have better effect.
- Water quality standard for water used in common air-conditioner and refrigerator, has been formulated by Japanese Industry Association of Refrigerator and air-conditioner, for detail reference following table.

Cooling water quality standard

	Item	Circulation		Direct-used mode	Trend	
		Circulation water	Feed water	Direct-used water	Corrosion	Dirt
Standard Item	PH(25℃)	6.5～8.2	6.0～8.0	6.8~8.0	○	○
	Electrical conductivity(25℃)(mS/m)	80 below	30 below	40 below	○	○
	Electrical conductivity(25℃)(μS/cm)	800 below	300 below	400 below	○	○
	Cl^-(mgCl^-/)	200 below	50 below	50 below	○
